PRESS RELEASE

O3 Partners' portfolio expanded with twelve new investments worth nearly EUR 40 million in the first half of 2026

Rotterdam, 25 August 2026

In 2026 to date, O3 Partners and its affiliated funds have expanded their portfolios with twelve new investments, further strengthening their presence in the technology and innovation ecosystems of Central and Eastern Europe and the DACH region. Three members of the platform – 3TS Capital Partners, Catalyst Romania and OXO Labs – have provided financing to innovative technology companies across the region, ranging from early-stage startups to growth-stage businesses and covering the full spectrum of company development.

The transactions reflect O3 Partners' platform-based operating model, which provides portfolio companies not only with capital, but also with strategic expertise and hands-on support. This approach enables the O3 Partners family of funds to invest across the entire innovation lifecycle – from early-stage ventures to technology companies on international growth trajectories – while creating long-term value for its investors and portfolio companies.

Investments across the full spectrum of the technology ecosystem

In recent months, **3TS Capital Partners** has expanded its international portfolio with seven new investments, primarily targeting companies with strong international growth potential across various segments of the digital technology sector.

As previously reported separately by O3 Partners, 3TS invested nearly EUR 6.6 million in Evrotrust, a Qualified Trust Service Provider (QTSP) offering digital identity, electronic signature and eIDAS-compliant trust services across Europe. In addition, since the beginning of the year, it has completed the following transactions:

- More than EUR 3.9 million was invested in Patronus to further develop its smartwatch- and mobile application-based solution, designed to enhance the safety and independence of older adults.
- A further EUR 6.6 million was invested in the expansion of Wamo's digital financial platform, which provides banking, payment and expense management services to small and medium-sized businesses across Europe.
- EUR 4.3 million was invested in Sybilla Technologies to further develop its optical systems and software for monitoring satellites and other space assets.
- A EUR 4.1 million transaction financed the further capitalisation of BookR Kids and the partial buyout of its existing investors. The company operates an interactive digital reading platform that supports children's language learning and reading skills through gamified experiences.
- EUR 3 million was invested in Euvic Ukraine to support its acquisition strategy and international expansion, as well as to strengthen its software development and digital technology services for corporate clients.

- Finally, EUR 3.9 million was invested in Tiger Technology to accelerate the development of its hybrid cloud-based data management platform serving enterprise data infrastructure.

Catalyst Romania expanded its portfolio with two additional investments in 2026, financing companies with strong international growth potential in the digital content and deeptech sectors.

The fund participated in Voxa's EUR 4.2 million investment round. The digital book platform provides subscription-based access to audiobooks, e-books and other digital content, with the capital raised supporting the platform's expansion in Hungary. The fund also participated in a EUR 3.2 million investment in Somareality to further develop its AI-powered eye-tracking technology, designed to support the analysis of cognitive states and neurological processes.

OXO Labs made three new technology investments during the period, continuing its activities in the Hungarian startup market while expanding its reach across the broader Central and Eastern European region.

The company invested HUF 60.4 million (approximately EUR 169,000) in Hungarian HR-tech company Giggle, which is developing a digital recruitment platform connecting workers seeking flexible employment with businesses; HUF 78.6 million (approximately EUR 220,000) in Internet Corp to further develop its IC Events platform, which provides digital solutions for organising corporate conferences, professional events and hybrid events; and HUF 80 million (approximately EUR 224,000) in Octopwn to further develop its automated penetration testing and vulnerability assessment solutions.

Management statement

"During the first half of 2026, the investments announced by members of O3 Partners reached nearly EUR 40 million. This demonstrates the broad reach of our platform and our ability to provide capital and support across the regional innovation ecosystem. By financing companies at different stages of development and operating across multiple markets, we are playing an increasingly significant role in strengthening the Central and Eastern European and broader European technology ecosystem. If we continue to successfully execute our plans to launch new funds and further expand the O3 Partners family of funds, we will be able to report on even more investments and significantly higher financing activity in the future," said Péter Oszkó, Founder and CEO of O3 Partners.
